PROFESSIONAL SUMMARY

Third-year Computer Science and Engineering student at Netaji Subhash Engineering College with hands-on experience in Machine Learning, supervised and unsupervised learning, model training, neural networks, computer vision, OpenCV, and YOLO. Built multiple ML prediction systems involving classification and regression and contributed to Astra AI, an offline astronaut safety and hazard detection prototype developed for SIH 2026. Strong problem-solving background with 150+ LeetCode problems solved. Seeking an AI/ML Internship to apply machine learning concepts to practical problems.

EDUCATION

Netaji Subhash Engineering College, Kolkata

B.Tech in Computer Science & Engineering

3rd Year

Expected Graduation: 2028

J.P. College, Ara, Bihar

Class 12 – PCM

72.4%

M.D. Carmel School, Jagdishpur, Bihar

Class 10

72.4%

TECHNICAL SKILLS

Programming: Python, C, C++, Java (Basics), JavaScript

Machine Learning: Supervised Learning, Unsupervised Learning, Model Training, Classification, Regression, Model Evaluation

Deep Learning: Neural Networks

Computer Vision: OpenCV, YOLO, Object Detection, Image Processing

Web/Backend: HTML, CSS, JavaScript, React.js, Node.js, Express.js

Database/Tools: MongoDB, Git, GitHub

Core: Data Structures & Algorithms, Problem Solving

AI/ML PROJECTS

Astra AI – Astronaut Safety & Hazard Detection System *Machine Learning / Computer Vision / OpenCV / YOLO*

- Developed an offline/local-first AI prototype focused on astronaut safety and hazard detection in microgravity environments.
- Used YOLO-based object detection and OpenCV for processing camera input and identifying objects in the environment.
- Designed the system to identify potentially hazardous objects or situations and determine associated risk/severity levels.
- Designed an event-monitoring workflow containing timestamps, detected events, confidence scores, risk levels, and visual evidence.
- Incorporated workflows for detecting possible astronaut emergencies and generating corresponding emergency events.
- Developed as the team's prototype for **Smart India Hackathon (SIH) 2026**.

Spam Mail Prediction System

Machine Learning / Python

- Developed a supervised machine-learning system for classifying emails as spam or non-spam.
- Worked through data preparation, preprocessing, model training, prediction, and evaluation.
- Applied classification concepts to a practical text-based prediction problem.

Parkinson's Disease Prediction

Machine Learning / Python

- Developed a machine-learning prediction system using structured medical data.
- Applied preprocessing and supervised-learning techniques to identify patterns associated with Parkinson's disease.
- Trained and evaluated a predictive model on the available dataset.

Heart Disease Prediction

Machine Learning / Python

- Built a supervised machine-learning model for predicting the likelihood of heart disease from patient-related features.
- Implemented data preprocessing, model training, prediction, and evaluation.

Car Price Prediction

Machine Learning / Python

- Developed a regression-based machine-learning model for predicting car prices using vehicle-related features.
- Applied data preprocessing, model training, and evaluation techniques.

Wine Quality Prediction

Machine Learning / Python

- Built a machine-learning model for predicting wine quality using structured dataset features.
- Practiced data preprocessing, supervised learning, model training, and performance evaluation.

ACTIVITIES & ACHIEVEMENTS

- **Smart India Hackathon (SIH) 2026 Participant** – Contributed to Astra AI, an AI-based astronaut safety and hazard detection prototype.
- **SAP Idea Ignition Participant** – Contributed primarily to the frontend development of the project.
- Solved **150+ problems on LeetCode**.
- Earned multiple **DSA Specialist badges on Naukri.com**.
